

Practice Partner® Patient Records with Bright Note Technology™

Electronic Health Record Solution

One Touch Sets Everything in Motion

Practice Partner® Patient Records

Electronic Health Record Solution

Practice Partner from McKesson is an award-winning electronic health record (EHR) and practice management solution that delivers an integrated system that empowers physicians to improve the quality of care and increase bottom-line productivity. Practice Partner modules, available separately or together, include Practice Partner® Patient Records, Practice Partner® Medical Billing and Practice Partner® Appointment Scheduler. Backed by the experience of a trusted industry leader, our proven solution has an established customer base of more than 25,000 users in medical practices of all sizes and specialties.

Bright Note Technology™

A core part of our total solution is **Bright Note Technology™** — the dynamic processing power that utilizes single-note synchronization to instantaneously populate patient data across the entire chart.

One Touch Sets Everything in Motion

*McKesson's Practice Partner v9.5 is 2011/2012 compliant and was certified as a Complete EHR by the Certification Commission for Health Information Technology (CCHIT®), an ONC-ATCB, in accordance with the applicable certification criteria for eligible providers adopted by the Secretary of Health and Human Services. This certification does not represent an endorsement by the U.S. Department of Health and Human Services or guarantee the receipt of incentive payments.

With the incentives designed to encourage the adoption of EHRs — whether pay-for-performance, Medicare, Medicaid or other incentives built into the American Recovery and Reinvestment Act — the decision to implement an electronic health record solution has never been more important.

Now with the introduction of Bright Note Technology, the decision to purchase an EHR solution has never been easier.

Bright Note Technology

Practice Partner with Bright Note Technology is an intuitive solution that helps physicians feel more comfortable using an EHR to care for their patients.

One Note.

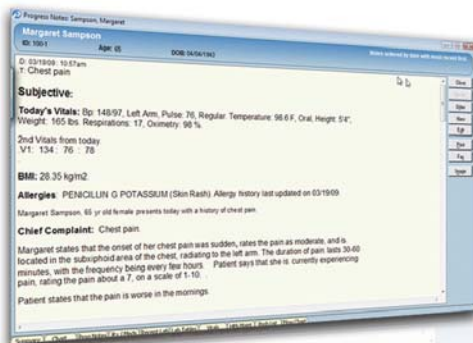

Bright Note Technology is a dynamic processing technology that allows physicians and other providers to use their preferred charting style to capture data in a single screen note.

One Touch.

With one touch, data is instantly synchronized across the complete chart. Searchable patient data is then automatically generated. The result is improved use, greater efficiency and enhanced clinical reporting and health outcomes.

Single-Note Synchronization

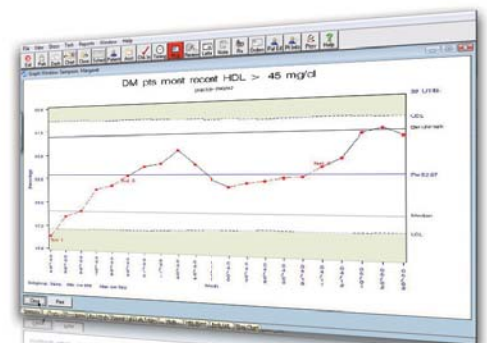

Behind the technology, dot codes help complete the single screen note and then — automatically — data is synchronized to the appropriate folders within the electronic chart. This single note-centric approach means less time dealing with the EHR and more time doing what you do best.

1. Single-screen charting makes it easy for physicians to complete the note using their preferred input method.

2. With one touch, data is instantly synchronized to appropriate folders within the chart.

3. Searchable patient data is automatically generated to help quickly produce meaningful clinical care reporting.

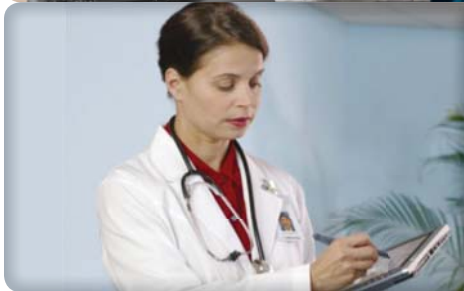

Bright Note Technology Matches Your Charting Style

By enabling healthcare professionals to use their preferred input method, Practice Partner delivers the most efficient and easy-to-use software that supports accuracy and consistency of patient health records.

Speech Recognition

For those who prefer to input verbally, our advanced speech recognition software with built-in dot codes allows the physician to quickly enter patient data that is instantly synchronized across the entire patient chart.

Templates

Whether input on a digital tablet or personal computer, custom templates make data collection extremely efficient as they're designed to your preferences and group's specialty. Using drop-down menus or point and click, your templates will produce consistent and complete patient data.

Keyboard

Simply enter the information on a single screen note and our software does the rest. By reducing keystrokes and eliminating redundancies, Bright Note Technology increases overall efficiency and consistency of health records.

Transcription

Whether dictating live or with a recorder or using handwritten notes, Bright Note Technology can also work with transcription. For some physicians who want to continue to use transcription, we adapt our technology for improved physician use.

Better Profitability and Clinical Care Reporting for Best Practices in Patient Care

Working like a physician's chart, the single screen progress note within Practice Partner, coupled with Bright Note Technology, delivers a powerful tool to help you quickly search and access data throughout the entire practice record.

The ability to access patient information and generate meaningful data is essential to delivering exceptional health outcomes and driving profitability. By automatically categorizing patient and practice level data into searchable and exportable fields, Bright Note Technology provides physicians and staff with quick access to information optimizing reimbursements, facilitating clinical care reporting and generating pay-for-performance data.

"Without the Practice Partner solution, the additional reimbursement and improved patient care would not have been possible. Practice Partner is really the only way to find out who my patients with chronic conditions are and target them for treatment. It's impossible to do this with paper charts."

Michael Mignoli, M.D.

Practice Partner Research Network

Practice Partner Patient Records is a key tool enabling quality of care improvements for physicians nationwide participating in the Practice Partner Research Network (PPRNet). Formed in partnership with the Medical University of South Carolina, PPRNet is a practice-based quality improvement and research network that provides clinical performance reporting on more than 50 separate quality of care indicators.

About McKesson Corporation

McKesson Corporation, currently ranked 14th on the FORTUNE 500, is a healthcare services and healthcare information technology company dedicated to helping its customers deliver high-quality healthcare by reducing costs, streamlining processes, and improving the quality and safety of patient care. Over the course of its 177-year history, McKesson has grown by providing pharmaceutical and medical-surgical supply management across the spectrum of care; healthcare information technology for hospitals, physicians, homecare and payors; hospital and retail pharmacy automation; and services for manufacturers and payors designed to improve outcomes for patients.
